## UNLOADER STUCKER

The universal and automatic unloader and stucker device is a kind of supplementary equipment for the packaging and printing machines. It can be fitted to any type of cutting, printing or laminating machine with automatic feeding, even at a later date.

The essence of the operation of the machine is that it conveys the materials fallen from the previous machine in the line and places them on the pallet of the stacking unit which is getting higher and higher continuously. It has an advantageous feature, namely the products or raw materials stacked this way need no any further adjustment or transfer, and this pile can be strapped and transported immediately.

Its typical features also include the ungraded variable belt speed adjustment and the manual and automatic mode options.

Type	KRB 1300	KRB 1900	KRB 2400
High of the table (mm)	660	660	660
Width (mm)	1680	2280	2780
Length (mm)	5628	5628	5628
High (mm)	2500	2500	2500
High of the stack (mm)	150-2200	150-2200	150-2200
Energy requirement (A)	3 x 10	3 x 10	3 x 16
Air pressure (Bar)	6	6	6
